Hello and thank you for your interest in learning more about Inspera's stance on accessibility.

For the past 20 years, Inspera has served hundreds of institutions and associations around the globe and is proud of our ongoing commitment to aligning and complying with internationally recognized accessibility standards. The following document represents a voluntary, independent audit of our current functionality, which will be updated—at least—on an annual basis. However, for larger feature upgrades, Inspera may elect to re-publish updated VPATS on an ad hoc basis to show ongoing and substantial compliance.

As part of ensuring the testing process is accessible and equitable, we make every effort to ensure students, faculty, and administrators with disabilities will have ease of access and use of our platform. To demonstrate this commitment, Inspera has instituted the following internal policies:

- Committed monthly technical development capacity dedicated to improving user accessibility
- Ongoing accessibility best practices training for technical, design, and product staff
- Voluntary submission of our platform capabilities to annual audit by a world-class accessibility audit company
- Implemented a direct feedback process for end users who have ideas to improve our accessibility for high visibility and prioritization

We do not want to just "comply" with accessibility, our goal is to lead the industry as an example to other educational technology solution providers.

We invite you to review our most current audit performed by Tech For All who is a leading authority on helping companies ensure their technology is inclusive. For over 20 years, they've been at the forefront of solving the most complex software and hardware inclusion challenges. Tech For All are pioneers who contributed to the creation of Section 508 of the Rehabilitation Amendment Act of 1998. Today, they continue to help organizations identify the applicable standards for their products or services. They provide the technical assessments and guidance necessary to achieve a truly accessible experience for all users. Inspera is proud to partner with Tech For All as leaders in accessibility, and together we are delivering on our goals of equal and equitable access to our solutions.

Inspera Accessibility Conformance Report

International Edition

(Based on VPAT® Version 2.4Rev)

Name of Product/Version: Inspera Originality Similarity Report (also known as Crossplag)

Report Date: January 7th, 2025

Contact Information: accessibility@inspera.com

Product Description

Inspera Originality (also known as Crossplag) is a tool that helps students, teachers, and bloggers ensure originality in their work by comparing each writing with more than 100 billion texts worldwide. In addition, Inspera Originality includes an AI-writing detector that is trained to predict the origin of text samples by using a combination of machine learning algorithms along with natural language processing techniques.

Evaluation Methods Used:

Test Dates: The accessibility assessment was conducted from January 7 to January 15, 2025.

Test Environments:

- Windows 11: Chrome 131/JAWS 2024 (Baseline detailed evaluation)
- MacOS 12.7.1: Safari/VoiceOver

Pages and functionality tested: The Accessibility Audit of the Crossplag plagiarism detection tool was limited to the Similarity Report page, accessed from: IO Report

The evaluator worked through the following components on the page:

- Report Navigation
- Left navigation pane functionality
- Document Viewer, including interacting with the highlighted source information and the Sentence Information modal
- Sources Panel
- Legend Highlight

Test Methodology: Testing was performed to assess the conformance of the pages with the WCAG 2.2 Accessibility Guidelines.

The accessibility assessment was executed according to the following steps:

I.   An accessibility expert conducted an overall technical analysis to identify issues of technical compliance that would affect mobility impaired, deaf/hearing impaired, and low vision users. The evaluator inspected each screen using Google Chrome with the axe DevTools and WAVE automated accessibility testing plugin. Further code analysis was conducted using browser Developer Tools.

II.   Keyboard accessibility analysis (for mobility and physically impaired users) was performed by attempting to thoroughly navigate the website through the keyboard, without using a mouse, using Google Chrome.

III.   For deaf and hard-of-hearing users, any audio content was assessed for proper captioning.

IV.   The accessibility for low vision users was evaluated three ways: (1) using the resizing capability offered by the browser; (2) applying text spacing adjustments using a bookmarklet; and (3) testing color contrast of text and

non-text elements using a combination of automated tools, code inspection and Colour Contrast Analyser (CCA) Version 3.5.4.

V. An expert screen reader evaluator performed the screen reader testing. The goal was to identify accessibility barriers that are likely to be experienced by users who are blind. The evaluator worked through the website using the JAWS for Windows (v. 2024) screen reader with Google Chrome and VoiceOver on Safari on MacOS.

VI. Any usability issues for users with disabilities encountered during the accessibility assessments in the above Steps were noted for subsequent mention.

Any usability issues for users with disabilities encountered during the accessibility assessments were also noted.

Chapter 3: [Functional Performance Criteria](#) (FPC)

Criteria	Conformance Level	Remarks and Explanations

Some interactive elements were not coded correctly for screen readers or had insufficient or overly verbose labels. Many error and success messages and loading messages were not available to assistive technology.
302.2 With Limited Vision	Partially Supports	It was not possible to apply text spacing adjustments to the text in the Document Window. Some content was truncated at 200% zoom and on reflow.
302.3 Without Perception of Color	Partially Supports	The document highlights in the Document Viewer required perception of color to understand which type of issue was being highlighted, but it is possible to access a text alternative by opening the Sentence Information dialog.

Criteria	Conformance Level	Remarks and Explanations
302.4 Without Hearing	Not Applicable	No audio content was present on the page.
302.5 With Limited Hearing	Not Applicable	No audio content was present on the page.

302.9 With Limited Language, Cognitive, and Learning Abilities	Partially Supports	The functionality of the checkboxes in the Sources Panel was unclear. Success messages were not shown when some actions were performed. Some plain text was coded as links.
